Module 2: Footprinting Lab 4: Google Hacking

Description: In this lab, we are going to take a look at the Google Hacking Database. Google hacking (sometimes called Google Dorking) allows us to use specific strings to narrow down search results and potentially locate usernames, passwords, and other data. One thing to keep in mind is that Google frequently disables some of these, so the Google Hacking Database site is going to be a great long-term resource of what still works.

Requirements for the lab: Web Browser
Step 1: Open a Web browser
<u>Step 2</u> : Search for Google Hacking Database (https://www.exploit-db.com/google-hacking-database/)
Step 3: Open the site
Step 4 : Search for the word Excel in the search box
<u>Step 5</u> : This will show several commands you can use based on the data you are seeking.
Step 6: Open Google search and either type the command or just copy/paste
Step 7: Write down any usernames or passwords you might find here:
